Executive Session

The City Council Development Committee may conduct a closed session pursuant to Chapter 551, Subchapter D of the Government Code, V.T.C.A. to discuss the following:

1. *Section 551.071 "Consultation with Attorney"*
2. *Section 551.072 "Deliberation Regarding Real Property"*
3. *Section 551.074 "Personnel Matters"*
4. *Section 551.087 "Deliberations Regarding Economic Development Negotiations"*

Citizen Comments

Citizens may speak during Citizen Comments for up to five minutes on any item not on the agenda by completing and submitting a speaker card.

Adjournment

Certification

In accordance with Chapter 551, Subchapter C of the Government Code, V.T.C.A. the City Council Development Committee meeting agenda was prepared and posted October 9, 2020.

Mona Lisa Galicia, Deputy City Secretary

City Hall is wheelchair accessible. If you plan to attend this public meeting and you have a disability that requires special arrangements, please call Mona Lisa Galicia at 972-237-8018 at least 24 hours in advance. Reasonable accommodations will be made to assist your needs.

Analysis

**City Council Development Committee
Regular Meeting Minutes
September 21, 2020
Council Briefing Room
300 West Main Street
Grand Prairie, Texas**

Committee Members Present
Chairman Jeff Wooldridge
Councilman Mike Del Bosque
Councilman John Lopez

Committee Members Absent

Chairman Jeff Wooldridge called a regular meeting of the City Council Development Committee to order at 5:02 p.m.

1. Consider CCDC minutes of the August 25, 2020 meeting.

Minutes approved.

2. 2021 City Council Development Committee Meeting Schedule

Chairman Jeff Woolridge opened discussion of meeting schedule. Deputy City Manager Bill Helm stated dates are tentative and are needed to draft council calendar.

3. Accessory Structures – Review and discuss regulations for accessory structures, focusing on size, flexibility on required materials and administrative variances. Review of proposed Unified Development Code amendment language.

Planning Director, Rashad Jackson, discussed the introduction of revisions to the Unified Development Code (UDC) for the building materials, size, and height for accessory structures. Mr. Jackson gave an overview of examples from other benchmark cities where a combination of regulations for height and size vary based on the existing neighborhoods and past variance requests. He stated the request for a maximum of 22 feet as a revision for the building height of accessory structures. Mr. Jackson also referenced the size of accessory structures and detached garages limitations and requested that the maximum square feet

stipulation of 750 square feet be removed and for the maximum square feet be 50% of the principal dwelling based on the zoning district. Additionally, he stated concerns regarding the maximum wall height for small structures of less than 200 square feet. The maximum height will be 10 feet based on the underlying zoning district, as measured from the finished floor to the roof plate. He stated that this will limit how tall the roof can be taking into consideration the roof pitch requirements already in place. Therefore, this would not necessarily create another hardship for residents. Mr. Jackson also stated to remove the specific square footage requirement for the size of accessory structure, as long as, the structure does not exceed the maximum lot coverage and size of the principal structure, which is already stated in the UDC.

Chairman Del Bosque asked someone with five (5) acres with a 10,000 square foot home and wanted to build a detached garage, a workshop, and a barn what the size requirements would be based on the size of the home. Mr. Jackson clarified that size requirement would be based on the size of the lot, not the principal home, which is based on the underlying zoning.

Mr. Jackson stated the request for a building material exception per House Bill 2439 (HB2439) and its regulations. He stated the exception request for the principal home is addressed in the UDC already but that a building material requirement cannot be upheld for accessory structures based on HB2439. He stated we can only enforce architectural details like articulations. He proposed to allow for metal to be used as an exterior building material of accessory structures larger than 200 square feet that adhere to the building code. Additionally, the structure must be located 30 feet from the front property line. Mr. Jackson added that neighborhoods with larger accessory structures have them placed at the far end of the lot. He also stated that one caveat for those neighborhoods a part of a HOAs staff would not want to approve anything that would conflict with the existing HOA requirements or restrictions.

Chairman Woolridge stated that applicants should confirm if proposed structure is allowed in their HOA even if city staff or committee say it is fine. Mr. Jackson agreed. He also stated that these revisions would decrease the number of variance applications for accessory structures.

Chairman Del Bosque what the revisions are applicable, or it is only for special situations.

4. Hybrid Housing – Discuss Hybrid Housing product, design preferences and possible regulations.

Planning Director, Rashad Jackson, introduced the concept of Hybrid Housing and using the standards of the town house zoning to address concerns of multi-family and single-family housing. He stated that using the town home development standards would help contribute to a true mix of hybrid housing design. Mr. Jackson discussed issues related to the Avila project regarding building orientation along the frontage and right-of-way screening, he recommended that the screening be at least up to the eve of the abutting home or setbacks further from the right-of-way. He also discussed the need for additional parking and/or direct to access parking homes as the current parking is designed for multi-family and not for the mix of both. Additionally, he stated the building materials that face the right-of-way could be addressed by requiring a mixture of materials

on all sides of the façade. He also discussed more open space that are conducive to the overall layout of the townhomes and single-family housing types along with adding interior drives to provide direct access to garages. He stated that staff recommended building orientation to face the right-of-way and allow some exceptions to face the sides. Mr. Jackson further mentioned that the discussed recommendations already exist in the Unified Development Code (UDC) but are under the town home standards and they should also be used for the proposed Hybrid Housing.

Chairman Del Bosque about restriction of materials. Mr. Jackson stated we cannot at this time due to the current House Bill (HB2439). Chairman Wooldridge also asked if this would be overturned soon.

Chairman Del Bosque additionally asked about exceptions to the material requirement and if they can be denied based on the materials used. Mr. Jackson stated they could not be denied solely due to materials, but we could encourage masonry materials.

Chairman Lopez asked where the proposed language would be located in the UDC. Mr. Jackson stated there isn't an official location of the language yet.

Chairman Woolridge also asked Mr. Jackson if there can be other wording for townhomes instead of "For Rent" Hybrid Housing choices. Mr. Jackson stated as part of the amendment proposed that a definition of Hybrid Housing be included.

Other Business:

Chairman Del Bosque asked about certain items and which committee should discuss certain items.

With no other business, the meeting was adjourned at 5:45 p.m.

Chairman Jeff Wooldridge

Analysis
Staff was contacted by developer, Walter Nelson, in regards to a proposed residential project in South Grand Prairie. The property is located along Highway 360 south of Lone Star Drive. The property is bisected by City of Mansfield and City of Grand Prairie city limits. The applicant has plans to rezone the property to allow for single family development. He has also noted the City of Mansfield would be willing to give their portion of the subject property to the City of Grand Prairie. The request is being reviewed to discuss the proposed rezoning and possible city limit boundary realignment.

Title

Proposed Master Thoroughfare Plan Amendment and associated development review of Cottages at Dechman.

Presenter

Rashad Jackson, Planning and Development Director

Recommended Action

Review and Provide Direction

Analysis

The Cottages at Dechman is a proposed hybrid housing development located at the northwest corner of Dechman Drive and the IH - 20 frontage road. The project will consist of 150 one-and two-bedroom rental homes. Access to the property will be via a full-access driveway to Dechman Drive. The City of Grand Prairie’s 2015 Transportation Thoroughfare Plan shows a collector roadway between Dechman Drive and the IH - 20 westbound frontage road that would run through the rear of this property. The proposed site plan does not show this collector. The applicant has proposed a revision to the thoroughfare plan to remove this proposed collector.

The City of Grand Prairie requires analysis of any Thoroughfare Plan amendment by the CCDC. The proposed amendment would eliminate a collector roadway directly north of the subject property. The review will

examine the effects of the proposed hybrid housing development and thoroughfare revision on Dechman Drive.

Department of Transportation Analysis - Brett Huntsman, City of Grand Prairie Transportation Planner

The Master Thoroughfare Plan (MTP) identifies an unnamed Collector which creates an additional connection from Fish Creek Rd./ Dechman Dr. to the Interstate 20 WB Frontage Road. This segment is located along the border of the Dallas County floodway and a vacant lot within PD-20.

The Collector is being addressed due to developer interest in the vacant lot. The roadway is not necessary for the site's operation and, therefore, is not being considered for construction by the developer. Moreover, the developer is not wishing to dedicate the required 70' right-of-way necessary to build the roadway.

City staff recommends removing this section from the MTP.

As required by the Unified Development Code, the developer of the vacant lot has provided a traffic impact analysis (TIA) identifying operations of the site and nearby intersections at buildout of the property. The TIA found that there would be no significant impact to the existing roadways and intersections following construction of the new development without the unnamed Collector.

Data was collected for the TIA included detoured traffic from the ongoing I-20 frontage road construction. Once the intersections of the I-20 Frontage and Carrier Parkway are completed, traffic volumes are anticipated to be reduced.

The recommendation of the TIA is that the roadway be removed from the MTP and that the project moves forward. City staff agrees with the recommendation.

Staff does not believe that the unnamed Collector would create additional development potential in the area. The parcel on the opposite side of the proposed development is Dallas County-owned floodway. There would be a considerable cost to acquire and develop this land with potentially significant impact to the existing floodway.

Executive Summary

Project Description

The Cottages at Dechman is a proposed development in Grand Prairie, Texas. The project will consist of 150 one- and two-bedroom rental *casitas*. The site is located in the northwest quadrant of IH-20 & Dechman Drive.

Access to the property will be via a full-access driveway to Dechman Drive. The City of Grand Prairie's *2015 Transportation Thoroughfare Plan* shows a collector roadway between Dechman Drive and the IH-20 westbound frontage road that would run through this property, but the site plan does not include this collector.

The City of Grand Prairie requires this analysis for the Thoroughfare Plan amendment that would eliminate the collector roadway, and to examine the effects of development on Dechman Drive.

Trip Generation

The proposed new development is expected to generate 1,510 daily trips, with 28 entering trips and 83 exiting trips in the AM peak hour, and 95 entering and 55 exiting trips in the PM peak hour.

Turn Lanes

Analysis shows that left-turn volumes are projected to meet thresholds for a turn lane. It is **recommended** to construct a northbound left-turn lane.

Traffic Impacts

Analysis shows that the intersections in the study area are projected to continue to operate acceptably without the proposed connector between Dechman Drive and the IH-20 westbound frontage road. It is **recommended** to seek a Thoroughfare Plan amendment that allows the development to proceed without constructing the connector between Dechman Drive and the IH-20 westbound frontage road.

I. Introduction

The Cottages at Dechman is a proposed residential development in Grand Prairie, Texas. The site is located in the northwest quadrant of IH-20 & Dechman Drive.

The project will consist of 150 one- and two-bedroom rental *casitas*. Access to the property will be via a full-access driveway to Dechman Drive. The City of Grand Prairie's 2015 *Transportation Thoroughfare Plan* shows a collector roadway between Dechman Drive and the IH-20 westbound frontage road that would run through this property, although this is not shown on the site plan.

The City of Grand Prairie requires this analysis for the Thoroughfare Plan amendment, and to examine the effects of development on Dechman Drive.

The study area included the following intersections:

- Dechman Drive & Project Access
- Dechman Drive & IH-20 westbound frontage road
- Dechman Drive & IH-20 eastbound frontage road

The study analyzed the following scenarios:

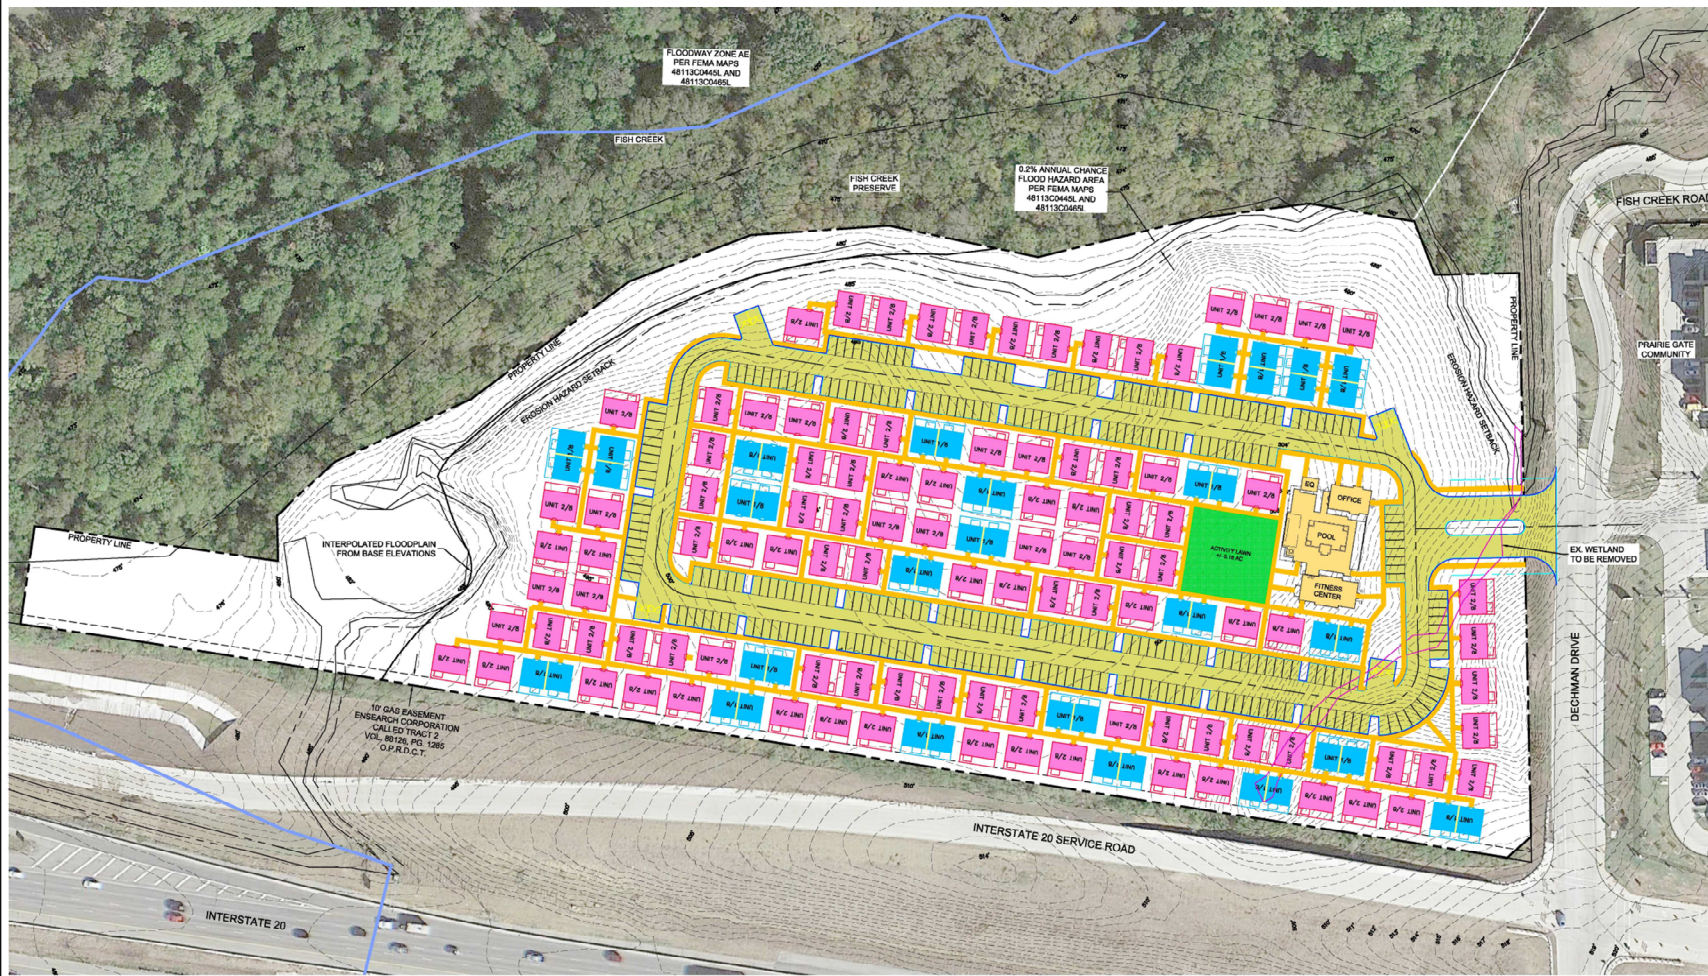

- 2020 Existing Conditions
- Full Build 2021 Conditions

The AM peak hour and PM peak hour were analyzed.

Figure 1 shows the most recent site plan. **Figure 2** shows the project vicinity map.

II. Existing Conditions

A. Existing Roadway Conditions

Dechman Drive is a two-lane roadway with a posted speed limit of 35 mph.

The IH-20 frontage roads are two-lane one-way roadways with a posted speed limit of 45 mph.

The City's *2015 Transportation Thoroughfare Plan* shows a collector connection between Dechman Drive and the IH-20 westbound frontage road that would run through this property.

B. Existing Intersection Geometry

The proposed property connection to Dechman Drive will be a full-access driveway located at the Prairie Gate Community Apartments driveway. Dechman Drive has a southbound left-turn lane.

Dechman Drive & IH-20 westbound frontage road is controlled with portable temporary signals. The westbound approach consists of a left-turn lane, two through lanes, and a right-turn lane. The northbound approach has a left-turn lane and one through lane. The southbound approach has one through lane and a shared through-right lane.

Dechman Drive & IH-20 eastbound frontage road is also controlled with portable temporary signals. The eastbound approach consists of a left-turn lane, two through lanes, and a right-turn lane. The southbound approach has a left-turn lane and one through lane. The northbound approach has one through lane and a shared through-right lane.

The geometric configuration of all intersections in the study area is shown in **Figure 3**.

C. Traffic Volumes

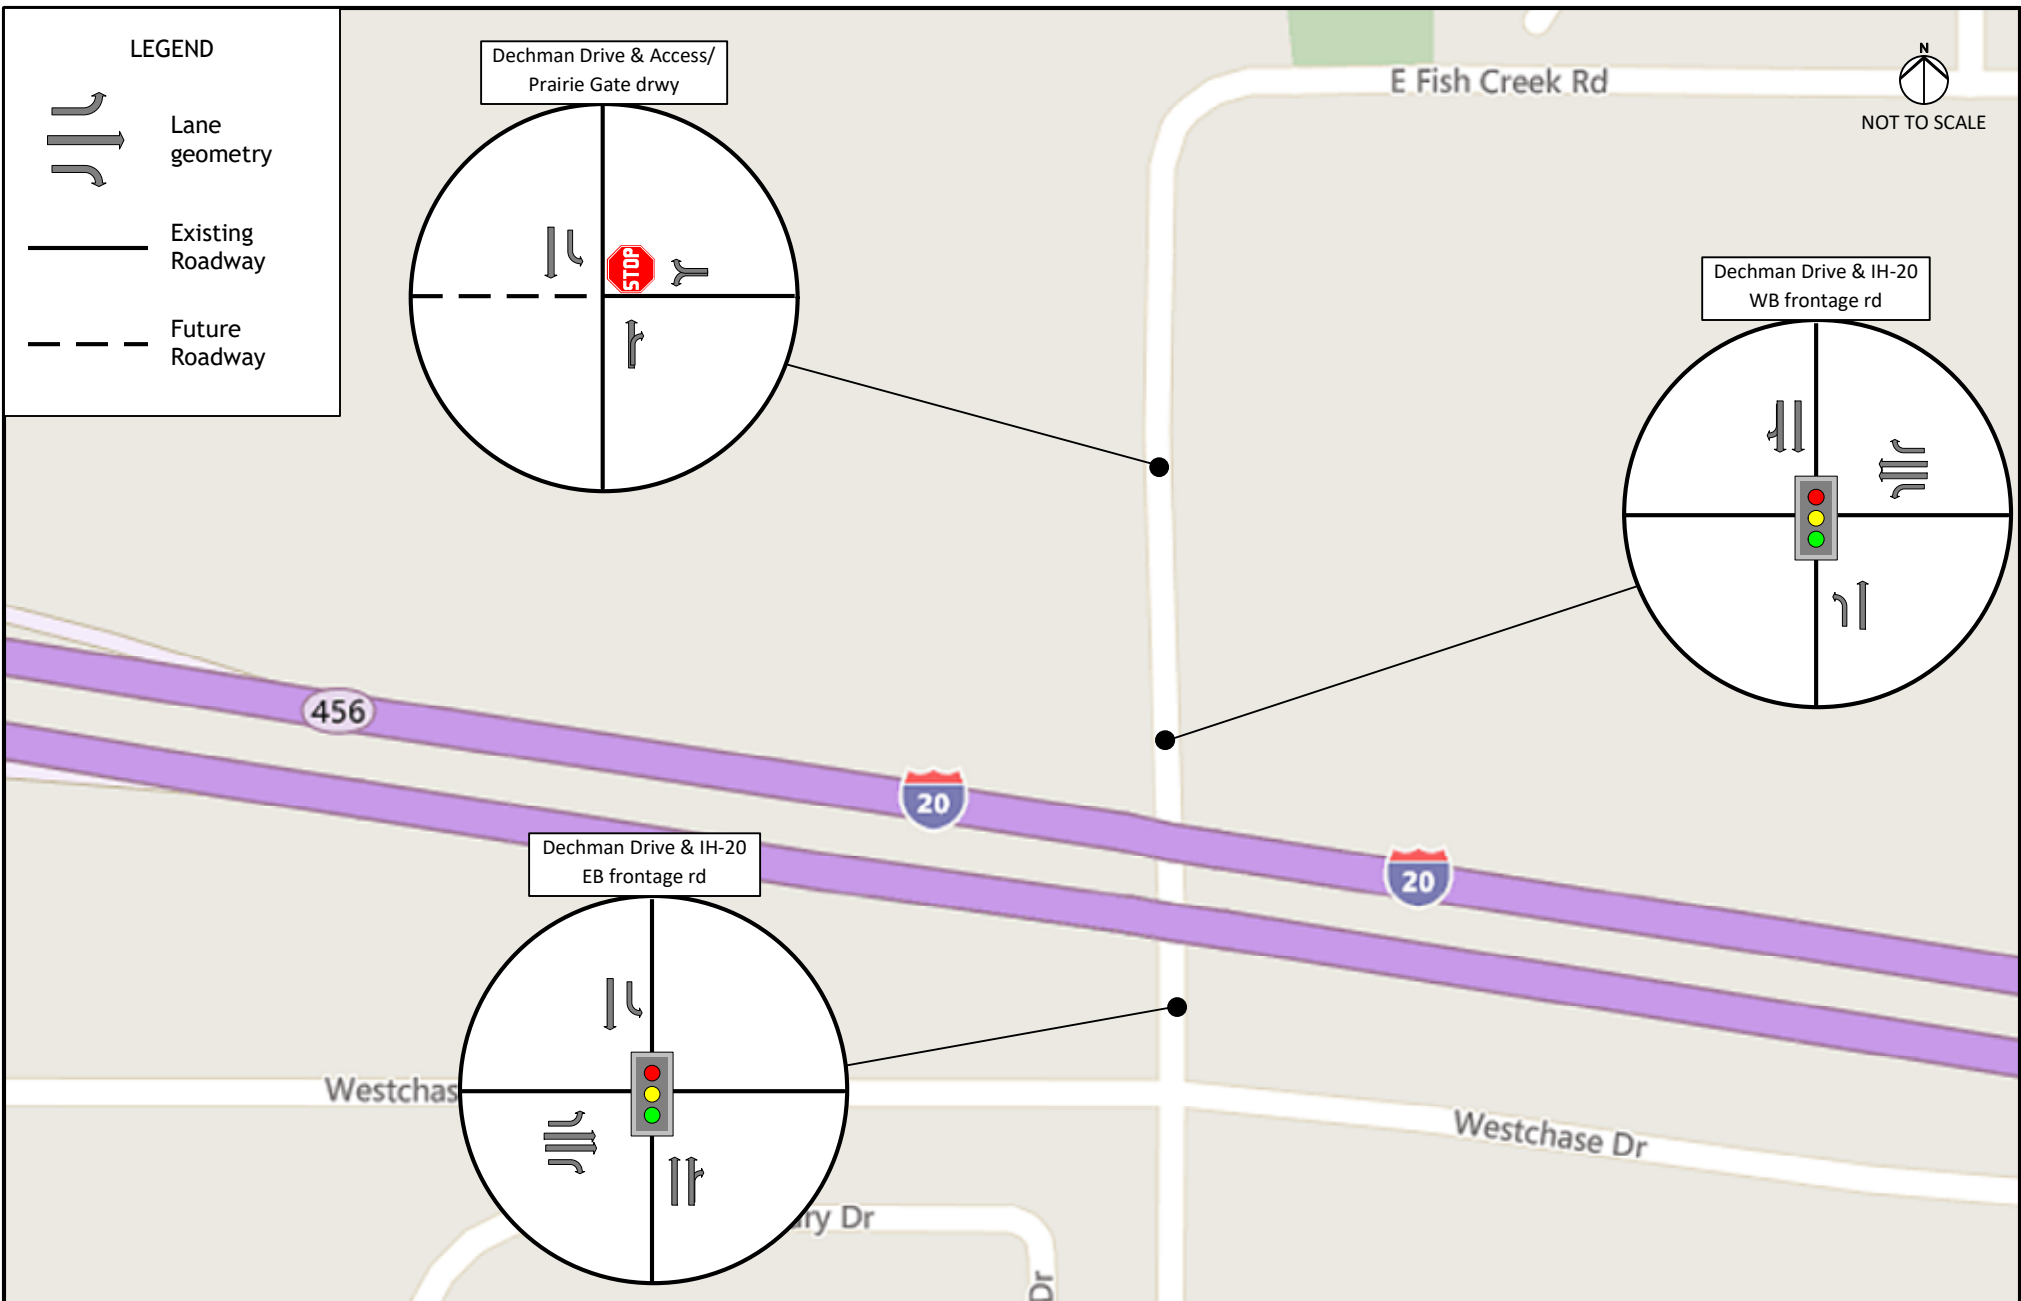

Traffic data collection for study area intersections was performed on August 25, 2020. **Figure 4** displays existing traffic volumes. These volumes can be found in the Appendix.

Current traffic patterns may have been affected by “social distancing”. This analysis examines historical traffic counts and compares to current data. Dividing historical data by current data determines the appropriate factor to apply in order to estimate “existing” traffic volumes.

According to the TxDOT planning office website, the daily traffic on Dechman Drive north of IH-20 in 2019 was 3,549 vehicles per day.

In August 2020, the daily traffic count on Dechman Drive at the same spot is 3,821 vpd.

Since 2020 traffic volumes are higher than historical counts, the analysis uses current data.

III. Methodology

A. Base Assumptions

Intersection capacity analysis was conducted using Synchro v10.0. Trip generation was calculated using the 10th edition of the Institute of Transportation Engineers (ITE) *Trip Generation Manual*. Right-turn and left-turn lanes were examined using the National Cooperative Highway Research Program (NCHRP) Report No. 279 *Intersection Channelization Design Guide*.

B. Background Growth

The City of Grand Prairie required a 3% per year background growth for this analysis.

C. Trip Generation

The development is proposed to consist of 150 single family homes. The *ITE Trip Generation Manual, 10th Edition* was used to estimate the projected trips by this development. Table 3.2 contains the summary of the land uses and sizes used for trip generation estimates.

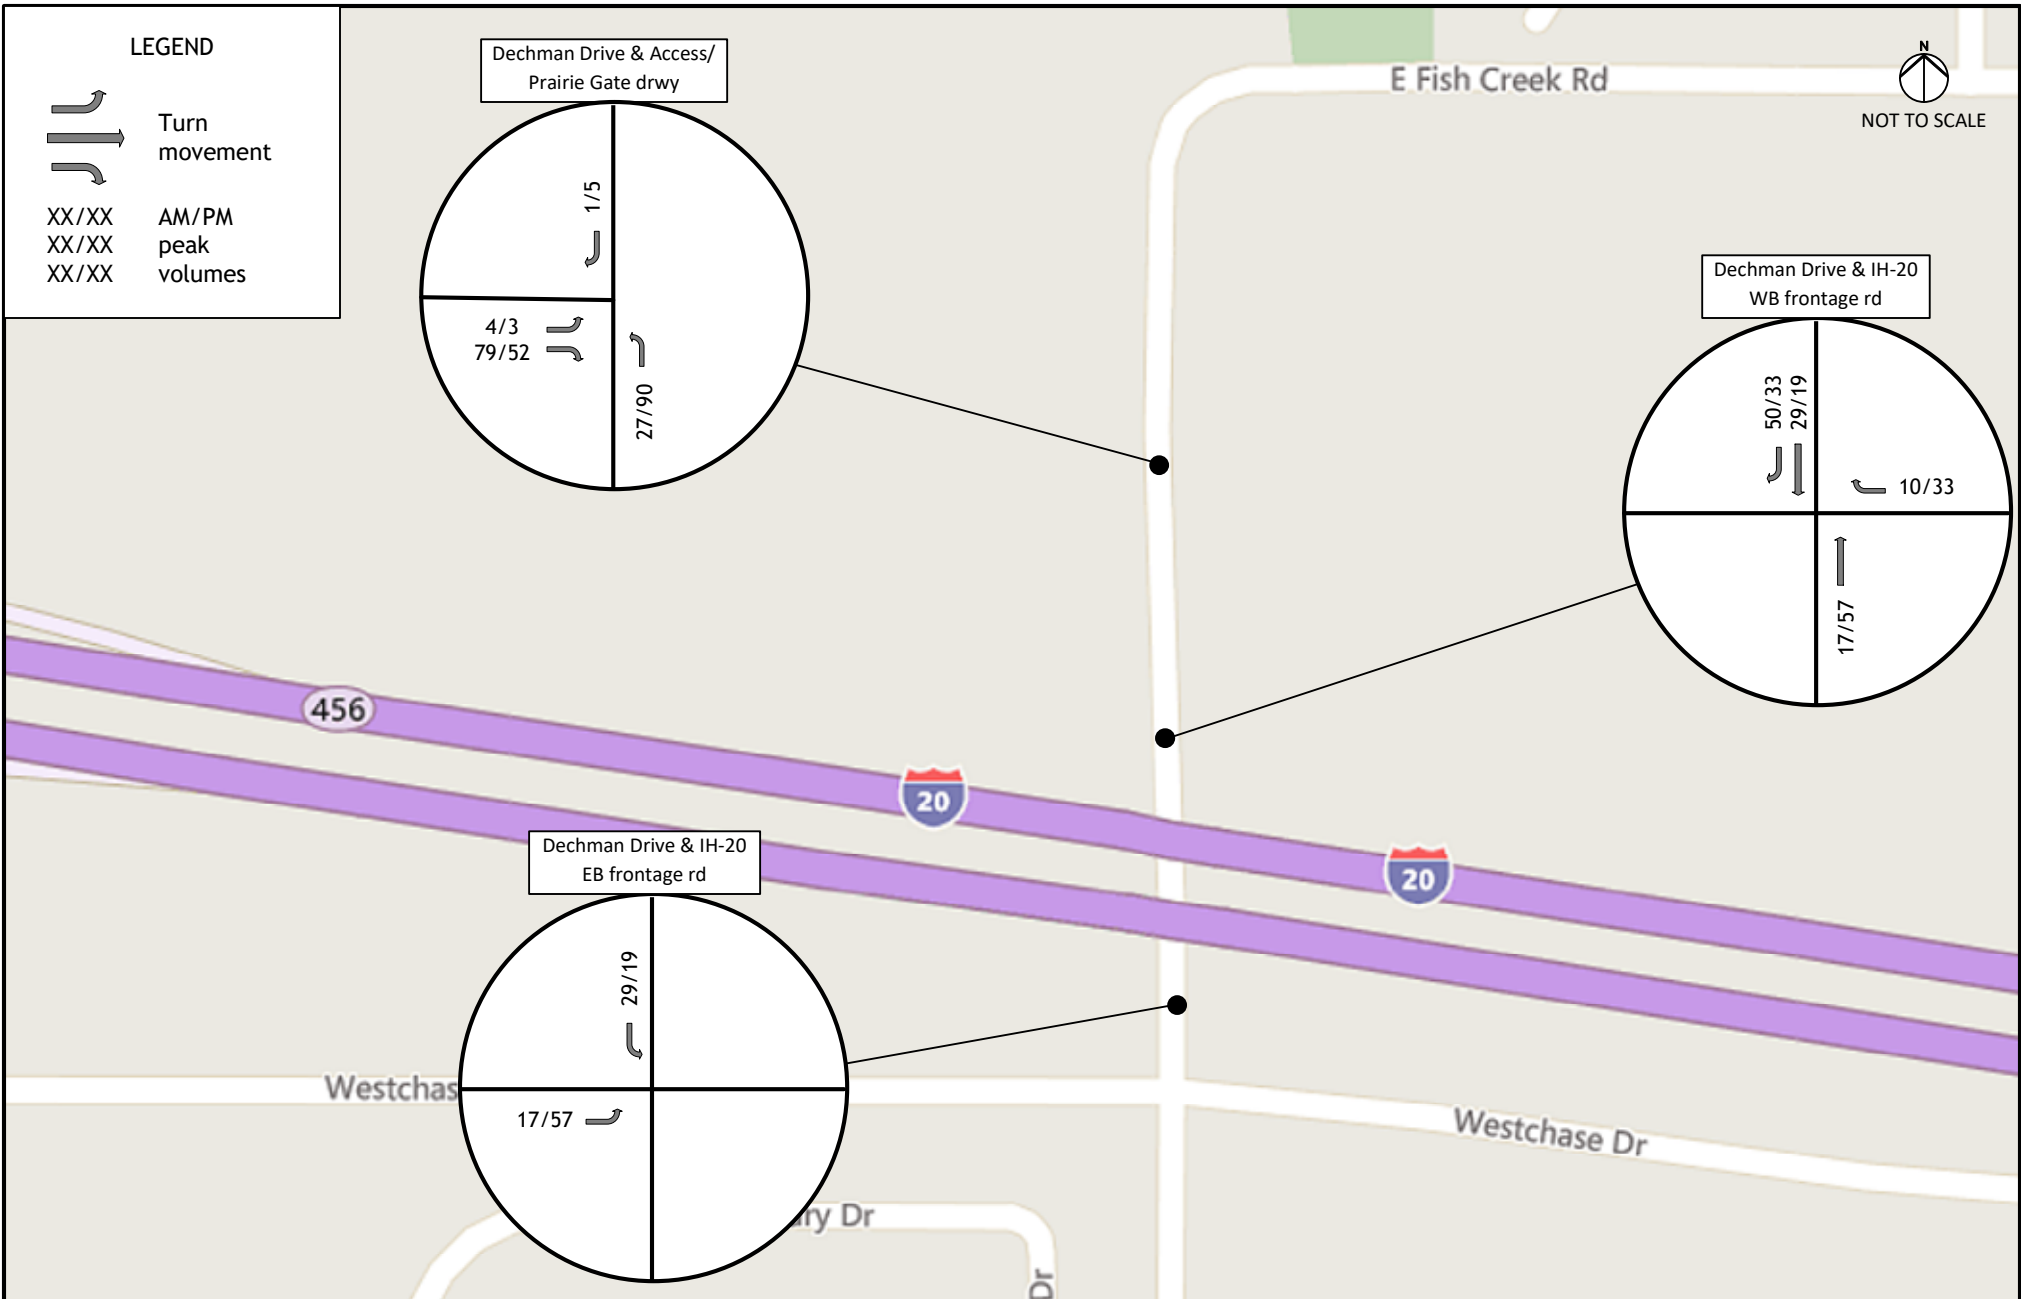

Average Weekday Driveway Volumes					AM Peak Hour		PM Peak Hour	
Land Use	ITE Code	Size	Daily Trips	Enter	Exit	Enter	Exit	
Single-Family Detached Housing	210	150 Dwelling Units	1510	28	83	95	55	

D. Trip Distribution

Trips for this proposed development were assigned to the surrounding roadway network based on existing traffic patterns. The proposed trip distribution for this project is:

- 5% to/from the north on Dechman Drive,
- 60% to/from the west on IH-20
- 35% to/from the east on IH-20

The projected site trips are shown in **Figure 5** and Full Build 2021 volumes are shown in **Figure 6**.

IV. Turn Lane/Access Management

A. Right-Turn Lanes

The National Cooperative Highway Research Program (NCHRP) Report 279 *Intersection Channelization Design Guide* was used to determine right-turn lane and left-turn lane thresholds for this study.

For public officials that do not have formal thresholds for determining when new access requires turn lane treatments, the NCHRP Report 279 is a tool in assessing the impacts from development. Specifically, this report allows the traffic engineering professional to input roadway type, posted speed, advancing volume (and opposing volume for left turns), and number of turning vehicles. The result is a plot on a graph defined by the above inputs recommending turn lanes or not.

Table 4.1 shows the volumes used for analysis.

Table 4.1 - Right-Turn Lane Analysis						
Driveway	AM/PM	Approach	Posted Speed	Advancing Vol	RT Vol	Turn Lane needed?
Dechman Dr & Project Access	AM	SB	35	68	1	No
	PM			175	5	No

Based on Full Build 2021 volumes, no turn lanes from Dechman Drive are required for the project driveway. These calculations can be found in the Appendix.

B. Left-Turn Lanes

Table 4.2 shows the volumes used in the analysis.

Table 4.2 - Left-Turn Lane Analysis							
Driveway	AM/PM	Approach	Posted Speed	Advancing Vol	Opposing Vol	LT Vol	Turn Lane needed?
Dechman Dr & Project Access	AM	NB	35	80	68	27	Yes
	PM			113	175	90	Yes

Based on Full Build 2021 volumes, a left-turn lane would be needed at the project driveway. These calculations can be found in the Appendix.

V. Capacity Analysis

The Transportation Research Board’s Highway Capacity Manual (HCM) utilizes a term “level of service” (LOS) to measure how traffic operates in intersections. There are currently six levels of service ranging from A to F. Level of Service “A” represents the best conditions and Level of Service “F” represents the worst. Synchro software was used to determine the level of service for intersections in the study area. All worksheet reports from the analyses can be found in the Appendix.

Table 5.1 shows the control delay per vehicle associated with LOS A through F for signalized and unsignalized intersections.

Table 5.1 - Highway Capacity Manual Levels of Service and Control Delay			
Signalized Intersection		Unsignalized Intersection	
Level of Service	Control Delay per Vehicle (sec)	Level of Service	Control Delay per Vehicle (sec)
A	≤ 10	A	≤ 10
B	> 10 and ≤ 20	B	> 10 and ≤ 15
C	> 20 and ≤ 35	C	> 15 and ≤ 25
D	> 35 and ≤ 55	D	> 25 and ≤ 35
E	> 55 and ≤ 80	E	> 35 and ≤ 50

A. Dechman Drive & Access

The proposed property connection to Dechman Drive will be a full-access driveway located at the Prairie Gate Community Apartments driveway. Dechman Drive has a southbound left-turn lane.

Table 5.2 shows the current LOS, control delay, and 95th percentile queue length for existing conditions.

Table 5.2 - Intersection LOS, Delay, and Queue by Movement - 2020 Existing								
Intersection	Approach	Movement	AM			PM

RT								

The City requested level-of-service analysis for Dechman Drive without the northbound left-turn lane. Table 5.3B shows the expected LOS, control delay, and 95th percentile queue length for Full Build 2021 conditions without the left-turn lane.

Table 5.3B - Intersection LOS, Delay, and Queue by Movement - 2021 Full Build

Intersection	Approach	Movement	AM			PM		
			LOS	Delay	Queue	LOS	Delay	Queue
Dechman Dr & access	EB	LT	A	9.2	10'	B	10.2	8'

	SB	LT	A	7.4	-	A	7.7	-
		TH	Free					
		RT						

Analysis shows that the westbound driveway would see slightly worse conditions without a northbound left-turn lane. This shows that the turn lane has a negligible effect on traffic operations and would mostly be a safety improvement.

B. Dechman Drive & IH-20 WB frontage road

Dechman Drive & IH-20 westbound frontage road is controlled with portable temporary signals. The westbound approach consists of a left-turn lane, two through lanes, and a right-turn lane. The northbound approach has a left-turn lane and one through lane. The southbound approach has one through lane and a shared through-right lane.

Table 5.4 shows the current LOS, control delay, and 95th percentile queue length for existing conditions.

Table 5.4 - Intersection LOS, Delay, and Queue by Movement - 2020 Existing

C. Dechman Drive & IH-20 EB frontage road

Dechman Drive & IH-20 eastbound frontage road is also controlled with portable temporary signals. The eastbound approach consists of a left-turn lane, two through lanes, and a right-turn lane. The southbound approach has a left-turn lane and one through lane. The northbound approach has one through lane and a shared through-right lane.

Table 5.6 shows the current LOS, control delay, and 95th percentile queue length for existing conditions.

Analysis shows that the intersections in the study area are projected to continue to operate acceptably without the proposed connector between Dechman Drive and the IH-20 westbound frontage road. It is **recommended** to seek a Thoroughfare Plan amendment.

VI. Summary and Conclusion

This study serves as an analysis of the traffic impacts from the Cottages at Dechman development in Grand Prairie, Texas.

This analysis was necessary due to the elimination of a connector roadway between Dechman Drive and the IH-20 westbound frontage road which would run through the property. Eliminating this roadway requires a Thoroughfare Plan amendment.

Trip Generation

The proposed new development is expected to generate 1,510 daily trips, with 28 entering trips and 83 exiting trips in the AM peak hour, and 95 entering and 55 exiting trips in the PM peak hour.

Turn Lanes

Analysis shows that left-turn volumes are projected to meet thresholds for a turn lane. It is **recommended** to construct a northbound left-turn lane.

Traffic Impacts

Analysis shows that the intersections in the study area are projected to continue to operate acceptably without the proposed connector between Dechman Drive and the IH-20 westbound frontage road. It is **recommended** to seek a Thoroughfare Plan amendment that allows the development to proceed without constructing the connector between Dechman Drive and the IH-20 westbound frontage road.

TURN LANE ANALYSIS

Figure 2 - 5. Guideline for determining the need for a major-road left-turn bay at a two-way stop-controlled intersection.

2-lane roadway (English)

INPUT

Variable	Value
85 th percentile speed, mph:	35
Percent of left-turns in advancing volume (V_A), %:	44%
Advancing volume (V_A), veh/h:	203
Opposing volume (V_O), veh/h:	175

OUTPUT

Variable	Value
Limiting advancing volume (V_A), veh/h:	203
Guidance for determining the need for a major-road left-turn bay:	
Left-turn treatment warranted.	

CALIBRATION CONSTANTS

Variable	Value
Average time for making left-turn, s:	4.3
Critical headway, s:	5.5
Average time for left-turn vehicle to clear the advancing lane, s:	3.2

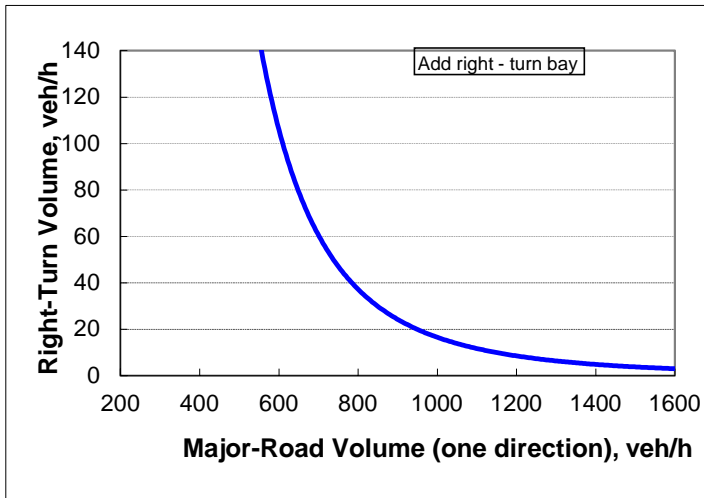

Figure 2 - 6. Guideline for determining the need for a major-road right-turn bay at a two-way stop-controlled

INPUT

Roadway geometry:	2-lane roadway
Variable	Value
Major-road speed, mph:	35
Major-road volume (one direction), veh/h:	175
Right-turn volume, veh/h:	5

OUTPUT

Variable	Value
Limiting right-turn volume, veh/h:	9348
Guidance for determining the need for a major-road right-turn bay for a 2-lane roadway:	
Do NOT add right-turn bay.
